Bibliographical reference management programs

While searching for scientific literature we collect bibliographical references, preserve articles, e-books etc.

It is easy to get lost in massive amount of information, however usage of information management programs help to find, share and systematize information in a more effective way.
Bibliographical reference management programs are used to simplify management of bibliographical information.

For example:

- preservation of documents;
- preservation of bibliographical references from library catalogues, databases or other resources;
- option to include references to cited resources by a click of mouse;
- program can generate list of references according to selected citation style.

RefWorks functionalities

- Possibility to preserve bibliographical references of information resources;
- records can be classified thematically or based on other features to catalogues, edited, search can be performed among existing records;
- prepare a list of references according to selected citation style;
- while writing final thesis in MS Word use the option to include references to resources and preparing a list of references;
- preservation of full-text documents;
- program has a tool which could be included in browser (RefGrab-It Bookmarklet), it makes easy to preserve resources. Tool can be found and installed from menu section Tools selecting RefGrab-It.

Note: RefGrab-It can not be used to include PDF documents.
RefWorks functionalities – preservation of bibliographical information

There are several options how to preserve bibliographical information in RefWorks program:

- direct transportation of bibliographical records from databases;
- preparation of bibliographical references manually;
- search of records and upload from catalogues and databases;
- records transportation from other reference management programs.
RefWorks usage basics

Login
https://refworks.proquest.com

User who login for the first time should create personal account. Select **Sign Up for a New Account**, fill in the form provided and create user account.
Direct references upload from database: Step 1
Direct references upload from database: Step 2

Import complete

- We've saved 1 document in your library.

OK
Example of uploaded record
1. Select title
2. Select editing button
3. Select **Attachments** and add full-text document.
Open-Access Mega-Journals: A Bibliometric Profile

Abstract

In this paper we present the first comprehensive bibliometric analysis of eleven open-access
mega-journals (OAMJs). OAMJs are a relatively recent phenomenon, and have been charac-
terised as having four key characteristics: large size; broad disciplinary scope; a Gold-OA
business model; and a peer-review policy that seeks to determine only the scientific sound-
ness of the research rather than evaluate the novelty or significance of the work. Our inves-
tigation focuses on four key modes of analysis: journal outputs (the number of articles
published and changes in output over time); OAMJ author characteristics (nationalities and
institutional affiliations); subject areas (the disciplinary scope of OAMJs, and variations in
sub-disciplinary output); and citation profiles (the citation distributions of each OAMJ, and
the impact of citing journals). We found that while the total output of the eleven mega-jour-
nals grew by 14.9% between 2014 and 2015, this growth is largely attributable to the
increased output of Scientific Reports and Medicine. We also found substantial variation in
Record creation manually
