CITATION REQUIREMENTS FOR CONTENT GENERATED BY GENERATIVE ARTIFICIAL INTELLIGENCE

Citation in APA 7 style
(applied to the works in the areas of social sciences and humanities)

1. **In the text**

When using generative artificial intelligence (GenAI) tools in a written work, the introduction should describe how they were used.

In the written work, it is necessary to include the question (prompt) submitted to the GenAI tool and provide a precise citation or the paraphrased text generated by the GenAI tool.

For example, a precise citation:

When asked "Can ChatGPT be used in students' written works?", ChatGPT generates an answer "the use of texts generated by ChatGPT is not desirable in students' written works, as this may be considered a form of academic dishonesty" (OpenAI, 2023).

For example, a paraphrased text:

When asked "Can ChatGPT be used in students' written works?", ChatGPT generated an answer, that the use of texts generated by ChatGPT is not desirable in students' written works (OpenAI, 2023).

The full answer can be provided in an appendix to the written work so readers have access to the exact text generated by the GenAI tool. It is particularly important to save the exact and complete text generated by the GenAI tool, as it may need to be shown to the instructor if needed. Only those responses generated by the GenDI tool that are mentioned in the text are included in the appendices. In this case, the in-text citation:

2. **In the list of references**

If GenAI-generated text has been used in the written work, it must be included in the reference list according to the APA 7 citation style requirements:

OpenAI. (2023). *ChatGPT* (Mar 23 Version) [Large language model]: https://chat.openai.com/chat

3. **In the appendices**

The full text generated by the GenAI tool is provided in the appendices, for example:

Appendix 1. Text generated by ChatGPT

When asked "Can ChatGPT be used in students' written works?", ChatGPT generated an answer:

As a working algorithm, ChatGPT is designed to generate textual content and help users respond to a variety of prompts. However, it should be noted that ChatGPT is a machine learning system, the information it provides is only an approximation and should not be taken as absolute truth. Furthermore, if you are referring to students' written works, it is important to understand that their task is to carry out independent work based on their own research or literature sources. Therefore, the use of texts generated by ChatGPT is not desirable in students' written works, as this may be considered a form of academic dishonesty. It is better to rely on reliable and verified sources, thus ensuring a high-quality and original result of the work.

1. In the text

When using Generative Artificial Intelligence (GenAI) tools in a written work, the introduction should describe how they were used.

In the written work, it is necessary to include the question (prompt) submitted to the GenAI tool and provide a precise citation or the paraphrased text generated by the GenAI tool.

For example, a precise citation:

When asked "Can ChatGPT be used in students' written works?", ChatGPT generated an answer that "the use of texts generated by ChatGPT is not desirable in students' written works, as this may be considered a form of academic dishonesty" [1].

The use of long citations and excerpts is not recommended in works of physical, technological and biomedical sciences. The full text generated by the GenAI tool is provided in the appendices.

For example, a paraphrased text:

When asked "Can ChatGPT be used in students' written works?", ChatGPT generated an answer (see Appendix 1), that the use of texts generated by ChatGPT is not desirable in students' written works [1].

2. In the list of references

If GenAI-generated text has been used in the written work, it must be included in the list of references.

Example:

1. OPENAI. *ChatGPT*. Large language model. Mar 23 version. Available from: https://chat.openai.com/chat [viewed 2023-04-28].

3. In the appendices

The full text generated by the GenAI tool is provided in the appendices, for example:

Appendix 1. Text generated by ChatGPT

When asked "Can ChatGPT be used in students' written works?", ChatGPT generated an answer:

As a working algorithm, ChatGPT is designed to generate textual content and help users respond to a variety of prompts. However, it should be noted that ChatGPT is a machine learning system, the information it provides is only an approximation and should not be taken as absolute truth. Furthermore, if you are referring to students' written works, it is important to understand that their task is to carry out independent work based on their own research or literature sources. Therefore, the use of texts generated by ChatGPT is not desirable in students' written works, as this may be considered a form of academic dishonesty. It is better to rely on reliable and verified sources, thus ensuring a high-quality and original result of the work.
